

Brüel & Kjær Vibro

Velocity sensors

Quality products from a single source

For more than 50 years, Brüel & Kjær Vibro has been a leading manufacturer of vibration measuring instruments and machine condition monitoring systems.

Brüel & Kjær Vibro provide world-wide services as well as rapid and customized system solutions.

For measuring and monitoring mechanical vibration in rotating machines, the technically correct acquisition of measurements is essential.

The appropriate sensor for your measurement task

With the extensive product range of Brüel & Kjær Vibro sensors, you will find the most suitable solution for your application.

Velocity sensors for the measurement of

- absolute casing vibration
- absolute bearing vibration

Displacement sensors and inductive displacement sensors for the measurement of

- relative shaft vibration
- relative shaft position
- absolute and relative expansion
- speed and phase position
- eccentricity

All brochures are available in PDF-file format from:

Velocity sensors

Range of applications

The velocity sensors of Brüel & Kjær Vibro measure mechanical vibrations in the **frequency range 1 Hz to 2,000 Hz**. Their high level of reliability has been proven by long-term installations in industry.

Velocity sensors are used for the measurement of the

- absolute casing vibrations
- absolute bearing vibrations in machines.

Coordinated solutions

The resonant frequencies of the velocity sensors are at 8 Hz or 15 Hz depending upon their different constructional features. Through electronic linearization of the respective frequency range it is possible to also measure vibrations that lie well below these resonant frequencies with high accuracy. The measuring and monitoring instruments of Brüel & Kjær Vibro operate with linearization circuits which are exactly tuned to the characteristics of our velocity sensors.

The essential benefits

- Selection of the adequate velocity sensor for the application from a variety of different constructional types for
 - high temperatures
 - explosive and hazardous areas and
 - underwater applications
- High suitability for industrial use thanks to the stainless-steel casing:
 - oil, water and dust-tight
 - low sensitivity to disturbing factors
 - suitable for use in a chemically aggressive environment and
 - low sensitivity to external magnetic fields through special construction
- Simple mounting due to
 - central threaded bore as well as the technically suitable installation accessories, cable and protective conduit
- Easy connection to the measuring instruments because
 - the active velocity sensor does not require a power supply and
 - delivers a high output voltage at a low internal resistance.

Technical data of the velocity sensor

Measurement direction	horizontal	vertical	horizontal & vertical
Operating conditions	Order code		
Standard for permanent installations	VS-068	VS-069	VS-077
Extended temperature range			VS-079
Ex-areas ¹⁾	VS-0168	VS-0169	VS-0177
Underwater (to a depth of 50 m)	VS-288	VS-289	VS-277
For portable use			VS-080
