

The Allrounders: VIBROPORT 80 & VIBROTEST 80

ACCEPTANCE TEST MODULE

The acceptance test function is often used for quality inspections in batch production (final acceptance). It compares characteristic values with limits established by standards, such as ISO 10816 or 7919. The module also allows you to draw on predefined or personally defined measurement tasks (setups) which can be stored as Templates. The configuration and creation of the templates is only possible in our Report & Examiner Software "ReX-PREMIUM". It is available free of charge, without copy protection and offers full unlimited functionality including use of unlimited time. In case you have purchased the VT-80/VP-80 Module Acceptance test you can download it on the website.

Acceptance Test Module

HIGHLIGHTS

- **Easy and intuitive handling:** with the possibility to create user-defined templates for the acceptance test procedure, including, for example, a picture of a machine
- **Highly flexible acceptance profiles:** can be set up by the user. Up to 64 bands in the frequency domain with 8 levels can be defined.
- **Color coding of levels:** for a quick and better overview
- **Quick and easy data export:** Via USB, SD card as .csv format for display in Microsoft™ or straight into the Report & Examiner Software
