Track A – Plant-wide Awareness

Asset Reliability Practitioner Training & Certification

Brüel & Kjær Vibro is an accredited Partner of the Mobius Institute[©]

The Asset Reliability Practitioner [ARP-A] Category I – Track A “PLANT-WIDE AWARENESS” course is intended for everyone working within an organization who in any way influence the management, design, engineering, procurement, maintenance, or operation of an organization that involves critical rotating machinery and electrical equipment.

Course Information:

Course Format: Public classroom (and live stream) courses in Nærum (Denmark) or Darmstadt (Germany). Private and on-site courses for a single company (min. 5 students) are available.

Optional: Certification examination, 2 hours, 60 multiple-choice questions, 70% passing grade. Can be taken online or in the classroom.

Certification Prerequisite: Prior experience is not required for attending the training course, but 6 months of general industrial experience is required for certification.

The Asset Reliability Practitioner (ARP) certification scheme follows the independent format of the time-tested ISO certification programs, such as ISO 18436, and it follows the guidelines defined under ISO/IEC 17024.

Detailed topic list:

Understand why improvement is desired

Introduction

- Overview of reliability and performance improvement
- What causes equipment to be unreliable or perform poorly
- The relationship between reliability improvement and asset management, operational excellence, TPM, and lean strategies
- The relationship between reliability and safety

Benefits

- How does the company benefit?
- How does the company benefit?
 - How to quantify the benefits?
 - Assessing the current state and measuring the value of the gap
- How do individuals benefit

Reliability Culture

- What it means to “think reliable”
- How to contribute to the reliability and performance improvement initiative
 - How important it is that you contribute
- How you can help others to understand the benefits

Leadership

- The importance of senior management support
- The importance of leadership throughout the organization
 - The difference between leadership and management (and reluctant obedience)
- Culture change
- Helping to gain and retain senior management support
- Engaging people in the reliability and performance improvement effort o Training and certification
 - Skills development
 - Awareness sessions

Strategy

- Why it is important for everyone to understand the strategy
- The importance of the mission and vision statements
- The role of the reliability steering committee
- The importance of contributing to the strategy and offering your ideas and observations

ARP-A Category I – Advocate Track A – Plant-wide Awareness Asset Reliability Practitioner Training & Certification

CAT - IA

Understand why failure occur

Understanding Failure

- Why does equipment fail?
 - Mechanical failures
 - Electrical failures
- Understanding equipment “failure patterns”
 - Does all equipment wear out with age?
 - What are “random failures”
 - Early age “infant mortality” failures
- Why is this so important?

Understand what we can all do about it

Defect Elimination

- Overview of the goals of defect elimination
- An overview of each of the main sources of defects and how to eliminate them
 - Design for reliability, maintainability, operability, and sustainability
 - Procurement for lowest life cycle costs
 - Transport without damage
 - Acceptance testing to reject defective equipment
 - Storage to eliminate degradation
 - Eliminating maintenance induced failures through precision installation, maintenance and commissioning
 - Eliminating operator induced failures
 - Proactive tasks that reduce the likelihood of failure and poor performance

Asset Strategy

- What is the asset reliability strategy?
- Maintenance/operation options:
 - Run-to-failure
 - Condition-based maintenance
 - Interval based maintenance
- What is involved in developing the strategy
 - The need for a master asset list and bill of materials
 - Asset criticality ranking
 - How it is developed
 - The need for a master asset list
- An overview of Preventive Maintenance Optimization [PMO]
- An overview of Reliability Centered Maintenance [RCM]
- An overview of FMECA.
- How can people share their knowledge to improve these processes?

Work Management

- The benefits of work management
- The basic flow of proper work management
 - How people can contribute to improving the work requests, work orders, and work process
 - Accurate reporting of failures and work outcomes
- The opportunity to improve work efficiency (or “wrench time”)
- How planning can minimize time/costs with shutdowns and outages?

- The role of the computerized maintenance management system [CMMS] or enterprise asset management [EAM] system

Spares Management

- The financial and work management benefit of efficient spares management
- Caring for spares
- How people can contribute to the spares management process

Precision and Proactive Work

- What is precision and the importance of precision work
- The basics of precision:
 - Shaft and belt alignment
 - Soft foot correction
 - Fastening
 - Machine balancing
 - and other common mechanical and electrical tasks
 - The importance of developing and following written procedures
 - The importance of precision installation, such as bearings, seals, gears, belts, pumps, electrical equipment, and other equipment
 - The importance of commissioning
- The importance of taking proactive steps to avoid future problems, including precision lubrication, resonance correction, power quality control, and keeping equipment and workplaces clean and organized

Condition Monitoring

- Overview of CM principles for mechanical and electrical equipment
- The relationship between CM and planning/scheduling and operations
- A detailed overview of:
 - Vibration analysis
 - Ultrasound
 - Oil analysis
 - Wear particle analysis
 - Electric motor testing
 - Infrared analysis
 - Non-Destructive Testing [NDT]
 - Process/performance monitoring
 - Visual inspections
- The future of CM and predictive analytics

Breaking Out of Reactive Maintenance

- An overview of the challenges
- The importance of focusing on breaking out of there active maintenance cycle
- Suggested techniques

ARP-A Category I – Advocate Track A – Plant-wide Awareness Asset Reliability Practitioner Training & Certification

Continuous Improvement

- The principle of and importance of continuous improvement, Kaizen, PDCA, and Lean
 - The need to reassess business conditions and what is critical
 - Utilizing metrics to measure and improve performance
 - Benchmarking against industry and the facilities “best day”
 - The importance of establishing the right KPIs
 - Suggested metrics and KPIs
 - Most effective use of KPIs
 - The importance of accurate data collection
- The importance of constant communication
 - Root cause (failure) analysis [RCA and RCFA]
 - The importance of conducting RCA/RCFA
 - The importance of making the improvements
 - How to perform RCA/RCFA
 - The need for on-going education, skills, and awareness training.
